---

## PROFESSIONAL SUMMARY

Computer Science Engineering student with hands-on experience in full-stack software development and AI-enabled systems. Proficient in C++, C, Python, Java, and JavaScript (ES6+), with applied experience building secure REST APIs, relational/NoSQL databases, and modern web applications using React.js, Next.js, and Node.js. Seeking an Entry-Level Software Engineer / Full-Stack Developer role to apply strong data structures & algorithms fundamentals and full-stack development skills to real-world engineering problems.

## EDUCATION

**Sahyadri College of Engineering and Management**, Mangaluru, Karnataka | Expected 2028

Bachelor of Engineering in Computer Science Engineering | CGPA: 9.97 / 10.0

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Artificial Intelligence

## TECHNICAL SKILLS

**Programming Languages:** C++, C, Python, Java, JavaScript (ES6+)

**Web & Backend Development:** React.js, Next.js, Node.js, Express.js, RESTful API Architecture

**Databases:** MongoDB Atlas, Firebase Realtime Database, SQLite, SQL

**Tools & Practices:** Git/GitHub, Postman, Tailwind CSS, JWT/bcrypt Authentication, Agile Software Development, Data Structures & Algorithms, Entity-Relationship Modeling, Process Synchronization

## ACADEMIC & APPLIED PROJECTS

### ParentAlert — AI-Based Elder Safety Monitoring System

Capstone / Course Project | June 2026

- Engineered a real-time safety monitoring dashboard supporting secure tracking for concurrent users by integrating React.js components with Firebase Realtime Database.
- Improved incident response and inactivity detection by implementing Firebase Admin SDK algorithms alongside Node.js REST APIs.
- Collaborated with a 2-member cross-functional team to build and validate an automated emergency alert mechanism, broadcasting GPS coordinates within seconds of SOS activation.

### FleetGuard — Enterprise Fleet Management System

Personal / Applied Project | August 2026

- Designed and prototyped a role-based admin dashboard using Axios for efficient frontend-backend data flow, focusing on optimized data retrieval and faster dashboard load times.
- Built and deployed REST API endpoints using Express.js, Node.js, and MongoDB Atlas to automate fleet compliance monitoring, including overdue and upcoming expiry reporting.
